

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-10. (Canceled)

11. (Currently amended) A method comprising an act of:

receiving content information and application information related to the content information from an information carrier, wherein the content information includes at least one of audio content and video content received from the information carrier;

determining a sub-collection of documents based on the application information,

facilitating Internet access to documents within the sub-collection, and

encumbering Internet access to documents that are not within the sub-collection.

12. (Previously presented) The method of claim 11, wherein the application information includes an identification of the documents in the sub-collection.

13. (Previously presented) The method of claim 11, wherein the application information includes an identification of a location for determining the sub-collection.

14. (Previously presented) The method of claim 13, wherein the location includes one of the information carrier, another information carrier, an internet site, and a broadcast station.

15. (Previously presented) The method of claim 13, wherein the location is configured to provide an interactive presentation that constrains Internet access to only the documents that are within the sub-collection.

16. (Previously presented) The method of claim 13, wherein the location is configured to provide a reference to the sub-collection.

17. (Previously presented) The method of claim 11, wherein at least one document in the sub-collection is identified by one of a Uniform Resource Identifier and a Uniform Resource Locator.

18. (Currently amended) The method of claim 11, including comprising an act of executing code of the application information to facilitate Internet access to the documents within the sub-collection.

19. (Previously presented) The method of claim 11, wherein the information carrier includes one of a portable medium and a broadcast medium.

20. (Previously presented) The method of claim 11, wherein the information carrier is a DVD.

21. (Currently amended) A player device comprising:

a reader that is configured to receive content information from an information carrier, wherein the content information includes at least one of audio content and video content, and

an access device that is configured to provide Internet access,

wherein

the reader is configured to selectively receive application information related to the content information from the information carrier, and

the access device is configured to:

determine a sub-collection of documents based on the application information,

facilitate Internet access to documents within the sub-collection, and

encumber Internet access to documents that are not within the sub-collection.

22. (Currently amended) The player device of claim 21, wherein if the reader does not read the application information, the access device is configured to provide unencumbered Internet access.

23. (Currently amended) The player device of claim 21, wherein the access device is configured to provide Internet access only when the information carrier is operatively coupled to the reader.

24. (Currently amended) The player device of claim 21, wherein the application information includes an identification of the documents in the sub-collection.

25. (Currently amended) The player device of claim 21, wherein the application information includes an identification of a location for determining the sub-collection.

26. (Currently amended) The player device of claim 21, wherein the access device is configured to execute code of the application information to facilitate Internet access to the documents within the sub-collection.

27. (Currently amended) The player device of claim 21, wherein the information carrier includes one of a portable medium and a broadcast medium.

28. (Currently amended) An information carrier object that is configured to include content information and application information that is related to the content information, wherein the

content information includes at least one of audio content and video content, wherein the application information is configured to enable a receiver of the information carrier to determine a sub-collection of documents based on the application information, facilitate Internet access to documents within the sub-collection, and encumber Internet access to documents that are not within the sub-collection.

29. (Currently amended) The information carrier object of claim 28, wherein the application information is configured to enable the receiver to provide an interactive presentation that constrains Internet access to only the documents that are within the sub-collection.

30. (Currently amended) The information carrier object of claim 28, wherein the application information includes an identification of a location for determining the sub-collection.
